COMPANY

AI BOOTCAMP • HAMBURG • JUNE 2026

We built an AI factory. *Now anyone can ship.*

The patterns are 70 years old. The leverage is brand new.

Jim Allen • CTO, celebrate GmbH

From AI users *to AI builders.*

01 • EXPERIMENT

**Langdock + Claude +
Cursor**

Prototype fast, low barrier

02 • SYSTEMATIZE

agent-builder-v2

Encode our standards as tools

03 • INDUSTRIALIZE

aiOS backbone

MCP, Builder & Agent Platform

04 • DEMOCRATIZE

Agentic Enablers

Non-engineers ship agents

THE PATTERN

Managed SaaS to learn fast — then an owned platform to scale safely.

We're not *starting from zero.*

01

70 years of CS still apply

The patterns we've refined for decades are exactly what agents need.

02

Shift left

Leverage moved upstream. Invest in the design and the PRD.

03

Context is king

An agent is only as good as its context. Curated knowledge is the moat.

04

Own the tools

*Fund a team that owns the platform.
Experiments become infrastructure.*

05

Codify your standards

Bake architecture and guardrails in — every build inherits them.

AI is a Trojan horse *for clean architecture.*

The disciplines we always wanted — specs, tests, versioning, clear standards — were the easy things to skip. Not any more. An agent only ships good work when the system around it is clean, so adopting AI quietly forces the engineering hygiene we should have had all along.

WHAT IT BUYS US

Specs, tests and standards — finally non-negotiable.

One factory, *two front doors.*

FOR ENGINEERS

agent-builder-v2

Cross-IDE plugin for Claude Code & Cursor.

- 13 personas + invariant gates encode our standards
- Workflows: cel-refine → cel-plan → cel-implement
- 80+ curated knowledge files as shared context

FOR EVERYONE ELSE

Builder & Agent Authoring

“Push code, get a secured app.” Describe an agent in plain language.

- Builder Platform: GitHub push → secured, deployed app
- Ona builds the agent from a natural-language definition
- Config-as-code: committed to Git, validated, deployed

aiOS • OUR SHARED AI BACKBONE

MCP Gateway

One MCP layer to every system.

Agent Platform

*AgentCore, Claude Agent SDK,
Bedrock-EU, Langfuse.*

n8n Automations

*Visual workflows for builders —
Bedrock-backed, governed.*

Serverless & EU

*ECS Express, CloudFront, OIDC.
Zero AWS access.*

What it's adding up to.

THE TAKEAWAY FOR BUILDERS

Treat agents like software — version, test and observe them — and the factory starts building itself.
